

Pattenden Falcon

Cider Apple Harvester

- 80 to 90 tons per day
- Cab for operator comfort
- Proven twin web pickup
- Two cleaning ploughs
- Four wheel drive
- High lift 2 ton basket

➤ Easily transportable

The Pattenden Falcon has a hydraulically folding picking head, road legal lighting and a 28 kpm top speed to get from farm to field quickly without having to load it onto a trailer.

➤ Versatile and manoeuvrable

With 4 wheel drive, flotation tyres and diff.lock the falcon can work in wet orchard conditions with minimal turf damage. The three mode steering (2 wheel steer, crab steer and circle steer) makes the Falcon a very easy machine to handle on the road and in the orchard.

➤ One pass harvesting

The Falcon is equipped with a front sweep to clear the wheel track, a proven twin web picking head, trailing arm side paddle and a high efficiency blower to make it a true one pass machine.

➤ Twin plough cleaning

The fruit is picked up on a twin web head and turned through 90° by a cleaning plough onto a cross web where it is turned 90° by the second cleaning plough into an auger to load the fruit into the 2 ton high lift basket. The twin ploughs give and auger give an exceptionally clean sample.

Specifications:

Engine: 71kw Deutz air cooled diesel.

Empty weight: 5500kg.

Overall width: 3.6m.

Transport width: 2.9m.
